Same as Cotton, you go to the source link

Select Biomass Resources>Surplus Biomass>Select the crop to view the required crop data

If u want to have the quantity of that crop in the selected region , then

Select Query Biomass & Other Statistics option>Select the point of interest of biomass plant>Select Draw on Map or required option>Click Start to identify proposed site>Click that location on map>Select Finish Drawing>Do same for the fetch area

Then you will get all the required essential information in the bioenergy analysis pop-up
